

# Kenya's Economy Dashboard

This dashboard provides a multi-year analysis of Kenya's key economic indicators from 2020 to 2024. It highlights how the country's macroeconomic environment has evolved by visualizing trends in GDP, government revenue, inflation, interest rates, exchange rates, and labour market performance. The goal of this project was to turn raw economic data into clear insights for policy review and decision-making.

## Tools & Data Preparation

I used **Microsoft Excel** for:

- Data cleaning (removing inconsistencies, handling missing values)
- Data transformation (standardizing financial years, formatting economic variables)
- Creating calculated fields such as GDP growth rate, inflation averages, and revenue changes
- Structuring datasets for smooth visualization across different charts

This ensured the dashboard was accurate, organized, and ready for analysis.
